

Overview

The WIN-PAK Gateway is the protocol translator for communication between a WIN-PAK network and the ONYXWorks[®] Workstation. The gateway processes information coming from each point on the WIN-PAK network and displays the point's event information on the Workstation.

The WIN-PAK Gateway Configuration Tool is your user interface for the gateway and is used to view a node's status, properties, and values (including alarms, events, and command flow messages).

A WIN-PAK Gateway can only monitor a WIN-PAK access control panel points on supported panels.

System Features

- Supports WIN-PAK Pro 2005 builds 563.5 and 573.
- Supports WIN-PAK SE/PE build 633.2.
- Works with Access Control panels N-1000 and PRO-2200.

Typical applications

- University campuses
- High rise buildings
- Hospitals
- Commercial office parks
